

The Company

A leading multinational energy and environmental solutions company known for its significant power generation capacity and renewable energy initiatives, it is committed to sustainability and enhancing communities. With a global presence in power generation and water desalination, the company is in a transformational stage to support carbon neutrality and a circular economy. The company relies heavily on advanced technology systems, including SAP HANA, to manage its vast array of assets and data.

Improving Surveillance and Tracking for a Global Energy and Environmental Solutions Leader

“Implementing SecureKi's PAM solution was a game-changer for us.

Senior IT Executive at a leading energy company

The Challenges

The company faced significant challenges in managing and securing access to multiple assets within SAP HANA. The absence of surveillance or tracking mechanisms posed a serious risk, as information stored in SAP services on the cloud was accessible to anyone, anywhere. This lack of control and visibility over who accessed sensitive information created vulnerabilities and compliance issues.

The Solution

To address these challenges, the company implemented SecureKi's Privileged Access Management (PAM) solution. This solution required all users to utilize SecureKi PAM to access SAP HANA, ensuring comprehensive surveillance and proper tracking of all activities. SecureKi's PAM provided robust access controls, session recording, and real-time monitoring, thereby enhancing the security and compliance of the company's operations.

A senior IT executive at the company commented on the implementation process: "Implementing SecureKi's PAM solution was a game-changer for us. It provided the surveillance and tracking capabilities we desperately needed. The onboarding process was seamless, and the support from SecureKi's team was exceptional throughout the deployment and beyond."

The Benefits

The implementation of SecureKi's PAM solution resulted in several significant benefits for the company. It enhanced security by ensuring that only authorized personnel could access sensitive information through centralized access control and session recording.

Compliance was improved with real-time monitoring and detailed audit logs, helping the company meet regulatory requirements and reduce the risk of non-compliance.

Operational efficiency was also achieved, as the centralized management of credentials and automated tracking streamlined the auditing process, saving time and resources.

Additionally, the company gained increased visibility into user activities through comprehensive surveillance capabilities, which reduced the risk of unauthorized access and data breaches.

Achieving Enhanced Security and Compliance in the Energy Sector
